nose	ears	legs	tail
These allow the kangaroo to see.	This helps the mother kangaroo to feed and protect newly born joeys.	These help the kangaroo move. They are strong and help them jump.	
mouth	eyes	pouch	

The emu uses these to hear sounds.	These are used for grip, scratching the ground and fighting.	The emu uses these to see with.
claws	legs	ears
These help the emu to balance when they run. They cannot fly because they are too small.	The emu uses this to gather food like insects, seeds, grass and leaves.	These are long and strong for standing and running.
eyes	wings	beak

Parts of Australian Animals

The diagram shows an emu with several empty boxes for labeling. On the left, a box is divided into two sections: 'body part' and 'description'. A line connects the 'description' section to the emu's body. On the right, there are three stacked empty boxes, with a line connecting the top one to the emu's head. Below the emu, there are two more empty boxes: one on the left connected to the leg, and one on the right connected to the foot.
