

# Answers - Sorting Skeleton Types

I can sort animals based on their skeletons.

Cut out and stick the animals based on the type of skeleton they have. Then write down one pro (positive) and one con (negative) for each type of skeleton.

Endoskeleton		Exoskeleton		Hydrostatic Skeleton		
 elephant	 human	 goldfish	 lobster	 butterfly	 jellyfish	 slug
 fox	 killer whale	 tortoise				
Pro	Con	Pro	Con	Pro	Con	
endoskeletons can grow with the animal	less protection, bones can break	provides a protective outer-layer	they cannot stretch or expand	can move around easily	easy to crush
